SUMMARY

Software Engineer at Infosysta Apps creating cross-platform mobile/desktop apps like 'Mobile For Jira' using Flutter and BloC. Currently developing multi-agent AI systems with Google ADK, React, FastAPI, and RAG. 3+ years experience with certifications in web development and cybersecurity from Coursera/Cisco. Computer Engineering graduate from Beirut Arab University (2022). Passionate about innovative solutions combining traditional development with cutting-edge AI technologies.

EDUCATION

Bachelor of Engineering in Computer Engineering | 2018 – 2022
Beirut Arab University, *Dibbiyeh, Lebanon*

TECHNICAL SKILLS

- Python
- Dart
- Google Agent Development Kit
- AI Agents
- Agent2Agent Protocol
- JavaScript
- Flutter
- BLoC
- ReactJs
- FastAPI
- RAG
- VertexAI
- Firebase/Firestore
- MS SQL Server
- GraphQL
- Git
- Jira
- Solution Design

PROFESSIONAL EXPERIENCE

Software Engineer, Infosysta Apps | *July 2022 – Present*

- Main developer for Mobile for Jira and Desktop App for Jira applications, architecting cross-platform solutions using Flutter framework and BLoC state management pattern
- Developed multi-AI agent system leveraging Google ADK, RAG, VertexAI, React, and FastAPI for

advanced automation capabilities and intelligent workflow optimization
- Mentor team members through code reviews and knowledge sharing while designing scalable, robust solutions following industry best practices to maintain high code quality standards

Full-stack Developer Intern, EDM, Beirut | *June 2021 – September 2021*

- Developed frontend components using AngularJS, Material Design, and Bootstrap, ensuring a responsive and user-friendly interface.
- Utilized backend technologies including Asp.net, MS SQL Server, Insight.Database, and GraphQL to build robust and efficient server-side functionalities.
- Integrated with Shiphero API

PROJECTS

HealthSync

- An AI-powered health and nutrition app that allows users to track calories, log meals via photo, create weekly personalized meal plans and chat with an AI Dietitian.
- **Technologies Used:** Flutter, BLoC, Firebase, Google AI

NutriPulse - Telegram bot

- An AI bot that provides meal analysis, personalized diet advice, and workout plans through chat.
- **Technologies Used:** Python, Telegram Bot API

Smart Gas Station with License Plate Detection

- A mobile app using Google's MLKit for real-time license plate recognition to enable contactless fueling and QR-based payments.
- **Technologies Used:** Flutter, BLoC, Google MLKit, Firebase/Firestore

Animate2Widget

- A flexible Flutter package allows developers to easily add custom or pre-defined animations to their widgets.
- **Technologies Used:** Flutter, Dart

Let's Mingle Dating App

- **Technologies Used:** Flutter, Firebase, BLoC, Agora Sockets

Flappy Bird AI - NEAT

- A neural network-based AI that learns to play Flappy Bird by evolving its neural network topology across generations.
- **Technologies Used:** Python, NEAT

CryptoPunks Website Clone

- A recreation of the CryptoPunks marketplace with dynamic UI and Web3 integration.
- **Technologies Used:** React, Bootstrap, ThirdWeb
